SUMMARY

Security analyst with full-time SOC experience supporting and tuning SIEM (Splunk Enterprise Security), investigating and responding to security incidents, and maintaining incident response playbooks. Experienced with EDR, IDS/NDR, threat simulation, web content filtering, email security, web application firewalls, certificate management, and AWS and Azure security controls. Writes security policies, standards, and procedures, and delivers work using Scrum and Kanban with JIRA and Confluence. Reduced false positives by 30% through a purple-team exercise. Eligible to work in Canada and able to obtain Reliability Status clearance.

TECHNICAL SKILLS

Security Visibility & Incident Response: SIEM (Splunk Enterprise Security, Splunk, Wazuh, Microsoft Sentinel), EDR, IDS/IPS, NDR, Threat Simulation, Incident Investigation, Incident Response Lifecycle, CSIRT Playbooks, Use Case Development and Tuning, Log Analysis, MITRE ATT&CK, SOAR (TheHive, Cortex), MISP, Suricata, Wireshark

Security Controls & Cloud: Firewalls (pfSense, OPNsense), Web Application Firewall, Web Content Filtering (Squid), Email Security, Certificate Management, AWS and Azure Security Controls, Microsoft Defender, Conditional Access (Entra ID), Network Segmentation, TCP/IP

Governance & Delivery: NIST, ISO 27001/27002, Security Policies, Standards and Procedures, Risk Assessments, Audit Support, Disaster Recovery, Capacity Planning, Scrum, Kanban, JIRA, Confluence

Scripting & Tools: Python, PowerShell, Bash, API Integration, Google Gemini API, Kali Linux, VirtualBox

WORK EXPERIENCE

SOC Analyst (Full-Time)
May 2023 – May 2024

7HillsCyberWall
Vadodara, India

- Reviewed and interpreted security alerts in Splunk, correlating firewall, endpoint, and IDS/IPS logs to diagnose true-positive incidents and escalate them for containment.
- Analyzed packet-level traffic in Wireshark and Suricata signature alerts to determine attack vector, cause, and impact, extract indicators of compromise (IOCs), and reconstruct incident timelines.
- Conducted vulnerability assessments and basic penetration testing across network and endpoint assets using Kali Linux and OPNsense, identifying misconfigurations and recommending mitigation measures to reduce security exposure.
- Documented incidents with root cause analysis, impact, and corrective actions, and updated SOC response playbooks based on observed attack patterns.
- Supported purple-team exercises with senior analysts, simulating adversary TTPs mapped to MITRE ATT&CK to validate detection coverage and tune SIEM detection and correlation rules, reducing false positives by 30%.

PROJECTS

Cybersecurity Home Lab: SOC Simulation with AI-Assisted Triage

VirtualBox, pfSense, Squid, Splunk Enterprise, Python, Google Gemini API

- Deployed a segmented multi-subnet enterprise network in VirtualBox with pfSense firewall rules, routing, DHCP, and a Squid transparent proxy enforcing department-level web-access policy.
- Deployed Ubuntu VMs simulating HR and IT departments with scripted traffic generation, and configured Splunk Enterprise for real-time firewall log ingestion and security-event monitoring.
- Developed a Python pipeline integrating the Google Gemini API to generate first-pass triage verdicts on blocked-traffic events for analyst review, automating a repetitive SOC workflow.

Advanced Network Security Lab: OPNsense & SIEM Integration

OPNsense, Suricata, Wazuh, TheHive, Cortex, MISP, Kali Linux

- Implemented and troubleshot OPNsense with Suricata IDS/IPS, Squid web-proxy filtering, CARP high availability, and multi-WAN failover for network redundancy.
- Deployed Wazuh endpoint agents and integrated Wazuh with TheHive, Cortex, and MISP as an open-source SOAR stack for automated alert-to-case creation and IOC enrichment.
- Tested cyber defence controls with Kali Linux attack simulations, validating detection, correlation, and response workflows end-to-end.

EDUCATION

Northeastern University
Sep 2024 – Mar 2026

Master of Professional Studies, Informatics (Information Security Management)
Toronto, ON

Parul University
Sep 2020 – Jun 2024

B.Tech, Computer Engineering (Cybersecurity)
Vadodara, India

CERTIFICATIONS & TRAINING

Certifications: CompTIA Security+ (SY0-701) · Splunk Core Certified Power User
Training: TryHackMe SOC Level 1 Path · LinkedIn Learning SOC Analyst Path · Purple Academy: Ransomware TTPs
